## Taiwan Outstanding SME 2014

### Outstanding SMEs in Next-Generation Electrical and Electronics Sectors

Situated at the center of the Asia Pacific, Taiwan is not only a transportation hub in East Asia but also an international logistics and transshipment center. Above all, it is the most competitive science and technology base in the world. Well-connected transportation, comprehensive infrastructure, colorful lifestyles, and a most friendly people—these combine to make a unique and dynamic Asian society. In the IMD's 2014 Global Competitiveness Report, Taiwan was ranked 14th. In particular, it has long stood out among the leading ranks in various international surveys when it comes to "Industry Cluster Development." Under meticulous government planning, the three science parks in northern, central and southern Taiwan easily become home to clusters of high-tech industries in a wide range of fields, including the automotive electronics industry, communication industry, LED industry, electronic parts industry, and others. They in turn form well-rounded supply chains. Taiwan's electrical and electronic manufacturers are readily recognized as the best partners of companies worldwide because they have fostered a unique competitive edge.

Taiwan electrical and electronic manufacturers' association (TEEMA), founded in 1948 representing more than 90% of the Taiwan electrical, electronic and ICT manufacturing organization. In 2013, there are 50.98% of total production value for Taiwan electrical and electronic industries (from the up, mid, to downstream sectors) and 47.2% of total export value for electrical and electronic industries. In order to strengthen Taiwan companies to boost the global competitiveness of the electronics industries, TEEMA has teamed up with proactive project plan—an initiative of the Ministry of economic affairs, Taiwan R.O.C., aimed at developing the next generation of electronics technologies—to establish of the Creative Collaboration Commerce Center Committee(5C). The goal of this project plan is to promote Taiwan companies to collaborate each others for their proactive RD resources, in order to create more outstanding technologies, innovative products and applications.

TEEMA 5C has held Taiwan Outstanding SME 2014 spotlights 40 Taiwan-based companies that are developing and supplying automotive electronics, communication, LED products, electronic parts, and other related products, applications and service. We hope that companies from around the world will take advantage of the unique and outstanding technologies and products to cooperate and joint venture with Taiwan companies. Further innovations, creative advance technologies, and future business growth can be benefit of all.

### 價值、速度、創新、學習

佳欣光電科技公司由 林永發 董事長成立於 1982 年初創，迄今已有 32 年的歷史。佳欣企業集團之營運總部設於台灣；製造基地分別有台灣廠、大陸佳欣廠、大陸廣欣廠等三廠；產品行銷全球，不斷致力於產品之創新研發與經營績效之提昇，並於 2002 年率業界之先驅，榮獲經濟部第十屆中小企業“創新研究獎”殊榮，2010、2011、2012、2014 共四年以 LED 車用燈具獲得台北國際汽車零配件展創新產品獎肯定，並以 LED 節能霧燈得到 100 年國家發明暨技術獎銀獎，為台灣汽車車燈廠商之研發標竿企業；公司堅持“誠信經營”之理念，廣為業界所稱譽。佳欣光電科技研發團隊能掌握世界車款流行趨勢，加上精心設計出既環保、美觀又流行之各項 LED 汽車車燈；而經由善用大陸之人工優勢及豐富之資源，提供客戶更具競爭力之商品。佳欣集團所提供商品種類齊全，客戶可以在此得到一次購足 (One Stop Shopping) 之便利性，藉由機動效率之彈性製造系統，提供客戶少量多樣的選擇，讓客戶可以方便集櫃出貨。近年來以優秀的光學設計、電子設計，不斷創新研究，發展低耗能並能通過法規標準的車用燈具，除了為台灣創造更多的車燈出口，也為全球環保盡一份心力。

### JS-131201 LED 近光頭燈模組

- 創新性：一般市售 LED 近光頭燈模組多以 2~10 個發光模組組合 (體積過大，耗能，重量過重)，設計僅需一組發光模組即可達汽車頭燈認證要求 (體積小，節能，重量輕)。吸引未來 OE 客戶組合其他燈具 (如：方向燈，霧燈，白晝燈等) 實用性高。
- 節能性：LED 相較於傳統燈泡原本即可節省 85~90% 電力，一般近光頭燈單邊使用 2~3 顆 18 瓦 LED。本產品僅使用 1 顆 18 瓦 LED，節能性更高。
- 安全性：LED 壽命長、低發熱、製程與物料無毒性，本產品發光面積大而均勻，可提升辨識度，有效避免車輛白天的碰撞意外。
- 市場性：我司產品外觀與品質更佳，優良的配光技術吸引 OE 製造商合作。客戶對於台灣廠商能以單顆 LED 達到 ECE R112 且無需使用主動散熱系統 (風扇強制冷卻) 均表示極高興趣。

### JS-12307 二合一 Led 白晝燈 + 霧燈

- 創新性：LED 霧燈光學設計難度高，再加上於有限空間納入晝型燈功能困難度倍增。本設計採用不同的反射區域置入不同亮度 LED，以單一 LED 全發光達到霧燈之法規配光要求，雙 LED 全 / 半發光達到晝行燈之法規配光要求。
- 節能性：傳統霧燈及白晝燈均使用 55W 燈泡。本產品使用節能 LED 設計，霧燈 / 白晝燈分別為 6.1W/4.5W，可分別節約電能約 89% 與 92%。
- 安全性：霧燈及白晝燈分別可提高行車時於起霧 / 一般白天之可辨識性，為汽車之重要安全配備，可有效降低事故率。
- 市場性：小尺寸組合燈大幅減少車頭的安裝空間需求，消費者容易安裝。LED 的節能 / 壽命長 / 高色溫普遍為市場所認知與接受。

### JS-12322 二合一 Led 白晝燈 + 霧燈

- 創新性：LED 霧燈因法規要求明案截止線 (Cut-off Line)，且亮度須高於燈泡式霧燈；再加上於有限空間納入晝行燈功能困難度倍增。採用不同的發光區域置入不同亮度 LED，以單一 LED 全發光達到霧燈、雙 LED 全 / 半發光達到晝行燈之法規配光要求。
- 節能性：傳統霧燈及白晝燈均使用 55W 燈泡。本產品使用節能 LED 設計，霧燈 / 白晝燈分別為 11W/6W，可分別節約電能約 89% 與 92%。
- 安全性：霧燈及白晝燈分別可提高行車時於起霧之可辨識性，有效降低事故率。
- 市場性：小尺寸組合燈大幅減少車頭的安裝空間需求。LED 的節能 / 壽命長 / 高色溫普遍為市場所接受。環型的 DRL 設計於使用上可讓消費者有高檔車種的高貴感。

### JS-131201 LED Low Beam Module

- Innovation-Normal LED low beam system are designed with 2~10 modules.(Volume is larger, waste energy, too heavy), Just Auto design with single module(smaller, economy, brighter).It attracts OE customers whom can integrate the modules into head lamps(ex: indicator, fog lamp, DRL....etc) easier.
- Energy Efficiency-To compare with traditional bulb, LED can save 80~90% electrical power. Normal LED low beam system uses 2~3 pcs of 18 watt LEDs. But in ours, the light source is only 1 pc of 18 watts LED, it can save more power.
- Security-The advantages of LED are long lifespan, lower heat generation, no hazard material. This can increase the illumination of driving car during night time.
- Marketability-Our low beam module has better appearance and quality, and also lower cost. The excellent optical technology can attract more OEM customers to get more business. Customers are impressed that manufacture can make LED low beam system by single LED in Taiwan, and without using active cooling system (fan).

### JS-12307 2-in-1 DRL+Fog Lamp

- Innovation-It is difficult for the optical design of LED fog lamp. Especially involving daytime running lamp in such limited space. The requirements of regulations are totally different between these two lamp. There are two LED being mounted in two optical areas. Single LED in fully intensity for fog lamp, two LEDs in half/fully intensity for D.R.L. This is a brand-new idea which Just Co. has patent pending.
- Energy Efficiency-Traditional bulb of fog lamp/DRL is in 55Watts. In this product, the power consumptions are only 6.1W/4.5W. It can save 89% and 92% energy.
- Security-Fog lamp and DRL can increase the signification of vehicle in foggy weather and daytime. It is important lighting to reduce traffic accident.
- Marketability-The design can minimize requirement of installing space, and allow user to fit lamps easily. The features of LED are energy saving/ long lifetime/high color temperature are popular in market.

### JS-12322 2-in-1 DRL+Fog Lamp

- Innovation-For more light intensity than bulb fog lamp and cut-off line, it is difficult for the optical design of LED fog lamp. Especially involving daytime running lamp in such limited space. The requirements of light distributions are totally different between these two lamps. Single LED in fully intensity for fog lamp, both LEDs in half/fully intensity for D.R.L.
- Energy Efficiency-the power consumptions are only 11W/6W. It can save 80% to 89% energy. The traditional bulb of fog lamp/DRL is 55 Watts.
- Security-Fog lamp and DRL can increase the signification of vehicle in foggy weather and daytime. It is important lighting to reduce traffic accident.
- Marketability-The features of LED are energy saving, long lifetime, and high color temperature are popular in market.

## Just-Make Touch for You

Jmtouch provides total solutions of Projected Capacitive Touch (PCT) module for IPC industry, with size ranging from 5 to 32" and shape aspect ratio from 16:3~16:16. The key component, glass touch sensor, is made with a unique & innovated specialty optical physics technology. The technology, in turns, renders the benefits of low quantity production capability for a variety of models. It fits the general requirement in IPC industry. Moreover, it requires only one tenth of the tooling expense for a project needing PCT size larger than 20". By doing so, JMTouch can bring down the barrier and reduce the risk dramatically for its customer to implement a new model for an uncertain market. In additions, the technology also renders an easy assurance of long term product support for 10 years, comparing to high cost for keeping the support by the other vendors with photo or screen-printing etching technologies. The servicing scope of JMTouch including, but not limited, machinery, automotive, gaming, medical, marine, aviation, military, instrument, home/office applications.

### 顧客第一、誠信負責、科技創新、永續經營

立昌先進科技股份有限公司 (SFI) 自 2000 年創立以來，即積極投入過電壓保護元件之開發與銷售，初期以積層 (Multilayer) 陶瓷產品為主，進而開發出一系列不同尺寸及電壓的 ESD 保護元件，應用於手機、NB、消費性產品等領域。近年以來，電子產業處於高速發展的時代，對於系統產品的需求要能更輕薄短小，另外對於電子元件功能也有更高的要求，有鑑於此，五年前立昌先進科技股份有限公司董事長連清宏博士專門成立 " 專案中心 "，主導各項研究計畫，提出將陶瓷材料奈米化的新思想，研發出多種性能的陶瓷材料，大部份該新材料已製成各系列的過電壓保護元件並交付客戶使用，主要應用於網通、安防、汽車、LED 照明等產業，目前已獲國內大廠承認使用，其主要性能指標除了能與國際大廠如 TDK、Murata、EPCOS、Littelfuse 接軌外，更超越其目前水平。近來有感於陶瓷材料的特性瓶頸，故跨足半導體的產品如 TVS、Schottky Diode、Switching Diode，期能將整個過電壓產品線補足。目前已開發出 TVS 產品，其抗靜電能力提升到 30KV 以上，漏電流極小，而且是完全無鉛設計 (Lead Free) 對於電子特性上有特殊要求的產業提供良好保護方案。立昌先進科技股份有限公司 (SFI) 有優秀的研發團隊，除繼續朝此方向開發出更適用性的保護元件外，並可以因應各戶需求進行客製化產品。

**(MLV=Multi-Layer Varistor):** MLV 系列產品為 SFI 開發的過電壓抑制器件產品，在構造上由導電金屬內電極及氧化鋅陶瓷層所構成，氧化鋅顆粒與陶瓷粉會形成多個二極體串並聯的結構。MLV 平時保持開路，當突波或靜電產生瞬間高壓時，會將過高的電壓導地，藉以保護線路中的敏感電子元件。

產品特性：a) 全系列全尺寸供應、b) 電流 - 電壓特性對稱，無極性、c) 優異的過電壓吸收保護能力，具高可靠度、d) 符合 RoHS & REACH 要求、e) 端極使用電鍍，具有良好的焊接性與耐焊性。

**(CSPD= Chip Surge Protective Device):** CSPD 利用專業製粉及生產技術 (擁有多項各國發明專利) 開發出的超高性能過電壓抑制器件，用來保護電器設施，能對終端產品提供承受高浪湧電流的保護特性外，更因貼片型式的封裝，更能節省客戶在 SMD 的打件工時及解決空間 (高度) 限制問題，由於 CSPD 極佳的電氣特性 (BDV 值、 $\alpha$  值、漏電流值、電容值分佈集中且離散度小)，不僅能解決目前市場上所使用放電管 (GDT) 或是壓敏電阻 (MOV) 無法克服的缺點外，更因 CSPD 具有極低的抑制電壓及快速的反應速度，不僅提供更佳的保護效果，更能承受多次浪湧電流的衝擊，乃過電壓浪湧保護器件不二選擇。

在 SHN 系列 (網通 / 安防 應用)、可符合 Surge 雷擊 10\*700 us / 6KV 的衝擊；SHC 系列 (高電流，基站台應用)、可符合雷擊 Surge 8\*20 us / 8000A；SHA 系列 (車用電子應用)：可符合 ISO7637-2 Pulse 5a (最高等級)；SHV 系列 (LED 照明電源應用)、可符合 UL1449, 500A 15 次，以及 4 次 / 6KV 500A 的衝擊。

**(SGD = Super new Generation Diode):** SGD 系列產品為 SFI 最新開發的二極體產品，SGD 產品具有優良的二極體能力，可以廣泛的應用在眾多應用領域，包括：靜電 ESD 抑制、整流及開關切換.. 等，特別是 STS 除保有原有 TVS 產品特性外，製程上完全無鉛，而且，在端電極上不需要打金線 (Die Bond) 利用新工法加大接觸面積讓散熱快，所以能力可達 ESD 30KV，信賴性佳，價格比傳統 TVS 便宜。

### Customers Oriented, Honesty & Responsibility, Innovation, Sustainability

SFI Electronics Technology Inc. (SFI) is established in 2000, engaged in the development and sales of overvoltage protection devices. At beginning, the main product is multilayer ceramic products. SFI has developed series of surge/ESD protection components with various sizes to apply in fields of mobile phone, NB, consumer electronics...etc. In recent years, under rapid development, electronics industry requires the system products smaller. In addition, it requires the higher function for electronic components. Since five years ago, Dr. Len Ching-Hohn, the president of SFI, establishes "Researching Center" to major in researching plans and proposes ceramic material in nano. It clarifies the scientific and forward-looking of new idea through more five years. Also, we get a through-broke development base on new idea and research the ceramic material with multiple functions. We have made series of overvoltage protection components and supplied to customers, which applies in networking, security, automotive, LED etc. The main performance is equivalent to international company such as TDK, Murata, EPCOS and Littelfuse, even better than the current level. Responding to bottleneck of ceramic materials, we launch semiconductor products such as TVS, Schottky Diode, Switching Diode, to complete full product lines. Now, we have developed TVS products, the ESD ability up to 30KV above, the lowest leakage current, and lead free, which provides the best protection solution for industries with special requirements of electronic functions. SFI has excellent R&D team, in addition to continuing to develop protection components with more application, and can supply customized products in need of customers.

#### MLV (Multi-Layer Varistor) Products

MLV Series is the overvoltage suppressor developed by SFI. The construction of component composes of conductive inner electrode and zinc oxide ceramic layers, which the particle of ZnO and ceramic powder will form the structure of multiple diodes in series and parallel. The varistors are usually in open circuit. When the transient high voltage or ESD occurs, the MLV will pass the overvoltage to ground to protect the sensitive electronic component in circuit. Features: a) Full range of size: (0201、0402、0603、0805、1206、1210、1812、2220、3220)、b) Symmetrical VI curve, No direction、c) Excellent overvoltage suppressor (ESD、Surge) and stable performance after working. Multilayer structure、d) Comply with RoHS & REACH、e) Termination with nickle plating (Ni/Sn), good soldering ability.

#### CSPD (Chip Surge Protective Device) Products

CSPD utilizes the professional formula and production technology (acquired international innovation patents) to develop overvoltage suppressor with excellent electric functions to protect devices. In addition to withstand high surge, it also saves the labor cost of SMD assembly and height limits due to SMD package. Because of the excellent electric performance (BDV,  $\alpha$ , Leakage current, concentration capacitance), CSPD can resolve the problem of GDT or MOV in market. Also, the low clamping voltage and quick response speed of CSPD make the better protection and withstand surge. Therefore, CSPD is the best choice of overvoltage protection. Products Series: SHN Series (Ethernet Network/ IP CAM)、comply with surge 10\*700 us / 6KV; SHC Series (High surge current, Base Station)、comply with surge 8\*20 us /8000A; SHA Series( Automotive): ISO7637-2 Pulse 5a (highest level); SHV Series (LED Power Drive)、comply with UL1449, 500A 15 times, 4 times/6KV/500A.

#### SGD (Super new Generation Diode) Products

SGD Series is a new developing diode product with the excellent ability to apply in various industries, including ESD protection, rectifier, and switching on-off...etc. Especially, the STS series remains TVS functions and process is completely lead free. Besides, it does not need "Die Bond" at end termination. We use new technology to enlarge area for heat dissipation. Therefore, the ability can stand ESD 30KV with good reliability and competitive price compared to traditional TVS.

## ANSYS Multiphysics

包括了結構分析、熱傳分析、流體分析、高低頻電磁場分析、聲場分析等，不論是單一或多重物理領域分析，均可在 ANSYS Multiphysics 中完成，應用領域包含了 3C 產品、光電、半導體、微機電系統、機械、航太、汽車、電機、醫學工程、土木結構等。

## RecurDyn

新一代多體系統動力學模擬軟體。採用「相對座標系運動方程理論」和「完全遞迴演算法」。傳統的動力學普遍存在過多的簡化、求解效率低下、求解穩定性差等問題，難以滿足工程應用的需要。RecurDyn 不但可以解決傳統的運動學與動力學問題，同時是解決工程中機構接觸「碰撞問題」的專家。

### CADMEN is the LOGO and means our service

Taiwan Auto-Design Co. (TADC), established in Taiwan in 1980 and organized by first generation of CAD/CAM engineers, is the first CAD/CAM marketing firm in Taiwan. In 1986, TADC established the CAD/CAM/CAE service center. In 1992, TADC hosted the first Taiwan Area ANSYS User Conference. Since then, TADC hosted Taiwan Area ANSYS User Conference annually.

Our service in CAE including as follows: (1)Structural Analysis:Linear static analysis that simply provides stresses or deformations; Modal analysis that determines vibration characteristics; Advanced transient nonlinear phenomena involving dynamic effects and complex behaviors. (2)Fluent Dynamics: Allow you to predict, with confidence, the impact of fluid flows on your product — throughout design and manufacturing as well as during end use. (3)Electronics: Design robust and power-efficient integrated circuits (ICs), printed-circuit boards (PCBs), communication infrastructures, and electromechanical systems. (4)Multiphysics: Many physical simulations involve coupled systems, such as electric and magnetic fields for electromagnetism, pressure and velocity for sound, or the real and the imaginary part of the quantum mechanical wave function. The Multiphysics can solve this all phenomenon at the same time on the same platform.

As the leading CAE provider in Taiwan, TADC wishes to provide our customers with the total solutions by integrating CAD/CAM/CAE/PLM, BPM and ERP and thus elevate not only the research and development level of the industries in Asia, but also achieve more efficiency and effectiveness.

### ANSYS Multiphysics

ANSYS has the industry's strongest multiphysics portfolio—enabling engineering teams to analyze the many forces that impact a complete product system, from embedded code all the way down to the chip level. Our portfolio supports collaboration and real-time information sharing among geographically dispersed team members. As a result, engineers can leverage systems-level analysis to make intelligent trade-offs in a low-risk, cost-effective virtual design environment.

### RecurDyn

The dynamic load history is needed to perform the FE analysis of moved mechanical equipment. It is gotten by the measurement or the dynamic analysis. Also, dynamics which is based on the analysis process is the beginning of all CAE analyses. RecurDyn has been evolved as the professional CAE program from MBD (Multi Body Dynamics) to the FE analysis, the optimization analysis, and the automatic control. Especially, the importance of Mechatronics (mechatronics=mechanics+electronics) in the mechanical equipment is increased gradually and the CAE analysis which is reflected by it is essential. RecurDyn most efficiently analyzes to the mechanism plant and the control plant in a solver.

### Arena

Few business decisions are straightforward. Changes in one area of your business impact other areas—often in ways not anticipated. Business process modeling software is an effective way to evaluate the full implications of business decisions before they are put into practice. Discrete event simulation describes a process with a set of unique, specific events in time. These flexible, activity-based models can be effectively used to simulate almost any process. For 30 years, Arena has been the world's leading discrete event simulation software.
